If your software trademark has been overlooked, please inform North Star, c/o Mail Stop 25.

NORTH STAR COMPATIBLE SOFTWARE DIRECTORY

INTRODUCTION:

This directory contains information primarily on domestically available software packages that are compatible with the North Star HORIZON® and/or ADVANTAGE computers. We hope it will assist you in locating software for your own particular application. We are currently adding international software packages for inclusion in future editions.

If you offer a North Star compatible software package which is not listed in the directory, please let us know so that it can be included in future editions. Simply fill out one of the forms included in the back of the directory for each software package. (Photocopy additional forms as needed.)

Mail completed forms to:

Software Directory
Mail Stop 25
North Star Computers, Inc.
14440 Catalina Street
San Leandro, CA 94577

This directory is for information purposes only. The suitability or functionality of these independent software packages is not guaranteed in any way by North Star Computers, Inc. The company assumes no responsibility for these items and is not liable for any damages caused by software failure.

While every effort has been made to ensure the accuracy of this information, there may be some errors and, no doubt, omissions of other software packages. Prices and/or specifications are subject to change without prior notice.

HOW TO USE THIS DIRECTORY:

The Table of Contents is a handy reference to use for locating software for your particular application. Information for each package includes Vendor Name (using abbreviations), Program Name, Operating System, and List Price. Full vendor names and addresses can be found in Appendix A, which is indexed by the abbreviations. Operating system versions (such as "CP/M 2.2") are given whenever specified by the vendor. "N.A." means "not available" at the time of this printing.

"NS DOS" is the North Star Disk Operating System. Software that runs under North Star ASP (Application Support Package) or CP/M operating systems will also operate in a multi-user environment using one of North Star's time-sharing operating systems. ASP packages can run multiple users under TSS/A; NS DOS and CP/M packages can use TSS/C. (See multi-user operating system section.)
